

SNOW & ICE SYSTEMS

CONVENTIONAL HYDRAULIC SOLUTIONS

A TURNKEY SOLUTION

This unique circuit design optimizes operations with full flow but also insures cylinders and spreader operations can work together when required. It is all-automatic. Paired with our entry level electronic controls for a customized and budget conscience solution.

PLOW/HOIST FUNCTIONALITY

- Proportional cable control or air control cylinders
- Configurable spools for all common applications
- Easy to use, setup and install

SPREADER FUNCTIONALITY

- Save salt/save money – electronic spreader system with groundspeed control
- Compatible with all common v-body and tailgate spreaders (stainless steel enclosure)
- Smart flow technology – keep the spreader running when the cylinders are actuated

HYDRAULIC PERFORMANCE

- Maximum pressure – 3,000 PSI (adjustable)
- Maximum flow – 24 GPM/nominal flow – 21 GPM
- Auger flow: 0 – 15 GPM
- Spinner flow: 0 – 15 GPM
- Cylinder flow: 0 – 20 GPM
